A single SQL script that can be used to create all the tables and data in the database.

- Runnable and non-trivial size
- July 31

Queries Operations. (Insert, delete, project, join, aggregation, etc.)

- Screenshots demonstrating the functionality of each query using the GUI.
- Before, during, after

Query: INSERT

- Done by Aug 1, Nathan

Query: DELETE

- Done by Aug 1, Dehao

Query: Selection

- Done by Aug 1, Nathan

Query: Projection

- Done by Aug 1, Dehao

Query: Join

- Done by Aug 1, Nathan

Query: Aggregation with GROUP BY

- Done by Aug 1, Dehao

Query: Aggregation with HAVING

- Done by Aug 1, Nathan

Query: Nested Aggregation with GROUP BY

- Done by Aug 1, Dehao

Query: Division

- Done by Aug 1, Nathan

Basic Security Practices: Sanitization

- Done by Aug 6, Dehao

Basic Error Handling

- Done by Aug 6, Nathan

Basic GUI.

- How to create a button and table
- How to place data in table
- How to refresh table on button press
- How to sort table on button press
- How to make a scroll wheel
- Gui useable with our created queries
- Done by: Aug 4

Prepare to demo project.

- Prepare re-create and repopulate the tables with the.sql files
- Prepare to demonstrate our queries
- Prepare for technical questions
- Done by: Aug 6
